Services Rendered and Price List – Fall 2017

1) Product Design & Formulation

Services included:

- Research & Development of the Product
- Raw Material Procurement
- Batching & Samples for Client Evaluation
- Shipping
- Product Modification

Procedure:

At the start of product design & formulation, Antrim will have a discussion to understand client product requirements. In case the client wants to reverse engineer a product currently in the market (“benchmark product”), client can send across the benchmark product to Antrim or Antrim can obtain the product, if available locally. At this point, Antrim is also willing to sign mutual Non-Disclosure Agreement (NDA) in case client requires.

After understanding product expectations based on client discussion/benchmark product review, Antrim will conduct further research and finalize a list of ingredients (“raw material”) to be included in the product. Antrim will send across the list of ingredients for client review.

Post client ingredient review and confirmation, Antrim will procure the raw materials and prepare product samples in its laboratory specially equipped to make cosmetics. Typically, Antrim will make 4-5 batches before it arrives at the final product suitable for client review. Antrim will then keep the samples for stability testing at 54 degrees Celsius for a week to confirm product stability. Post confirmation, Antrim will send two versions of the product for the client review.

Client will evaluate the product and provide feedback to Antrim. In case any changes are required, Antrim will make those changes and ship one modification back to client for review. Any further modification will involve additional charges.

Once client is satisfied with the product, Antrim will send the formula with process instructions.

2) Paper Formula

Services included:

- Research of the Product/existing formula
- Product Modification

Procedure:

At the start of product design & formulation, Antrim will have a discussion to understand client product requirements. In case the client wants to reverse engineer a product currently in the market (“benchmark product”), client can send across the benchmark product to Antrim. After understanding product expectations based on client discussion/benchmark product review, Antrim will conduct further research and provide the modified formula.

Client will evaluate the paper formula, prepare samples and provide feedback to Antrim. In case any changes are required, Antrim will make changes and provide the updated formula.

3) Product Formula Review/Troubleshooting

Services included:

- Product review/troubleshooting based on client requirements

Procedure:

In many instances, client will have an existing formulation and will want Antrim to review the formula and suggest changes based on client requirements. In such cases, client will provide the formula and product expectations. After reviewing the formula and client expectation, Antrim will conduct further research and suggest changes.

Client will review the changes and provide feedback to Antrim. In case any changes are required, Antrim will provide further guidance.
